(54) Title: APPARATUS FOR CONNECTING OF A PLURAL OF INTERFACE

**WO 2005/041365 A1**

(57) Abstract: Disclosed is an apparatus for matching a plurality of interfaces. The matching apparatus includes a first matching unit provided in a first interface and a second interface, respectively, a second matching unit that is matched to the first matching unit, and a data transmit/receive unit for transmitting/receiving data by using one of the first and second interfaces that are connected by the matching of the first matching unit and the second matching unit. Therefore, a single port is used to selectively connect an optical interface and a copper interface. It is thus possible to reduce the number of a port in an Ethernet system, etc. and thus minimize the volume of the system.
